

ACTIVITY 1.1 — Headings

OBJECTIVE

Students will become familiar with formatting text by using all 6 different heading tags.

PART A

Add 4 more headings using the 4 remaining heading tags.

`<h1>` and `<h6>` have been done for you already.

PART B

HTMLCoder123 needs help with starting their website! Help HTMLCoder123 figure out which headings would be best for each of the 3 section titles they wrote.

Heading	Description
Hello! This is My Super Awesome Website	Most Important Heading
About Me:	Second Most Important Heading
Made by HTMLCoder123	Least Important Heading

NOTE: Each line of text should use a different heading tag

If you need help, find the section with the matching part below or use the example!

Part A - Use Headings

A **heading** tag is used to separate different sections on a website.

There are 6 types — `<h1>`, `<h2>`, `<h3>`, `<h4>`, `<h5>`, `<h6>`.

`<h1>` is the most important and the biggest.

`<h6>` is the least important and the smallest.

EXAMPLE

INPUT:

```
<h1> h1 heading - Use for most important and biggest heading! </h1>  
<h6> h6 heading - Use for least important and smallest heading! </h6>
```

OUTPUT:

h1 heading - Most important and biggest heading!

h6 heading - Least important and smallest heading!

Part B - Apply Headings

Use heading tags for different parts of your website.

If you want to add a welcome message to your website, you should use `<h1>`.

If you want to introduce a particular section, you should use `<h2>` or something smaller.

EXAMPLE

INPUT:

```
<h1> Welcome to my website! Please enjoy your stay! </h1>  
<h2> About me </h2>
```

OUTPUT:

Welcome to my website! Please enjoy your stay!

About me
